Governor Arnold Schwarzenegger  
State Capitol Building  
Sacramento, CA 95814

Dear Gov. Schwarzenegger:

At the United Nations World Environment Day in San Francisco last June, I understand that you sent a signal to the rest of the country that California is serious about reducing our contributions to global warming in a big way. You are reported to have said:

"I say the debate is over. We know the science. We see the threat. And we know the time for action is now."

As President of PCR Services Corporation, one of the leading environmental consulting firms in the California, I agree wholeheartedly and am writing to urge you and your administration to move forward expeditiously in implementing strategies to reduce greenhouse gas emissions in our state to meet your climate targets. I support your goals to reduce greenhouse gas emissions to 2000 levels by 2010, to reduce greenhouse gas emissions to 1990 levels by 2020, and to reduce greenhouse gas emissions to 80 percent below 1990 levels by 2050.

As one of the largest emitters of greenhouse gases in the world, California cannot afford to stand idle. Global warming threatens our economy, quality of life, our health and our environment. Increased temperatures due to higher greenhouse gas levels in the atmosphere threaten severe weather conditions, which in turn can affect water quality and supply, increase air pollution, and potentially lead to more cases of heat stress, infectious disease, asthma, respiratory and other health problems.

California will benefit from policies that support development and investment in clean, efficient energy and innovative technologies that will help our environment, create new jobs, and grow our economy. Companies can reduce their greenhouse gas emissions (GHG), and save money. DuPont, for example, has reduced GHG emissions by almost 70 percent since 1990 and realized net \$2 billion dollars in savings. IBM reduced GHG emissions by 65 percent and realized a net savings of \$791 million. CalEPA estimates that worldwide demand for new technologies developed to reduce GHG emissions will create a global market potential of over \$180 billion annually. California is uniquely positioned to take the lead on policies to address global warming.

GOVERNOR ARNOLD SCHWARZENEGGER

PCR

We can do it, but are, of course, dependent on your leadership. Governor, you have my support.

Sincerely,  
PCR SERVICES CORPORATION

Gregory J. Broughton  
President
